

Make your electric fence gates safer with SafeBreak™

- Durable and non-conductive
- Releases upon forced entry
- Holds on for up to 60% of the spring's capacity

We all know that driving through an electric fence across a stock lane can be dangerous, if not lethal. But how to avoid it?

Electric fences are part of everyday life on most farms. The fact is that the fences are there for a reason. How do we make them safe?

Enter the SafeBreak™. This is an end insulator with a difference. The standard electric fence hook or handle clips into the spring clip of the SafeBreak™. When a motorcyclist rides into the fence the SafeBreak™ releases the fence, preventing damage to the fence or rider.

The SafeBreak™ reduces broken tapes, spring handles, or stretched springs reducing maintenance.
